

FLOOR PLAN 122 sqm

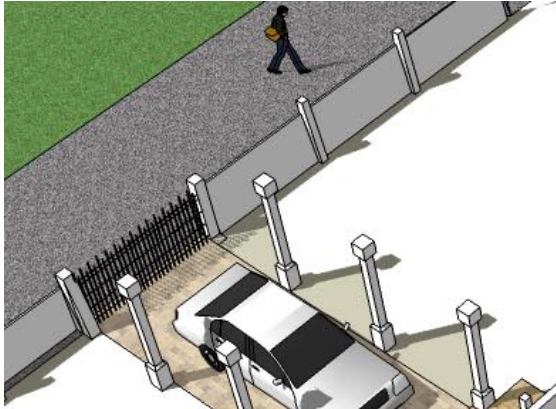

The house ideas are ment to inspire you when you plan for building your new home in Thailand.

The intention is to mix the western comfort with a piece of Thai architecture. This is not a complete construction concept, only look at it as design ideas.

If you are private person and want go on using my design you can do it free of charge. However if you do, I would like some feedback from your building story. For professional users I declare my copyrights as designer. But I am always open for business agreements.

I strongly advise you to take the drawings to a Thai architect or engineer for adaption to Thai building techniques as well as overlooking the details in Thai traditional architecture.
